LEFT AND RIGHT

Materials From the Tianjin People's Art Publishing House

Zhaohua Publishing House

Beijing 1984

It is lunchtime. Everyone in the kindergarten is eating with a spoon in the right hand

except Panda. His spoon is in his left hand and often bumps into Cat's.

Suddenly, Cat's
spoon is knocked out

of her hand. She asks
the teacher to help.

Deer, the teacher, tells Panda, "Hold the spoon in your right hand and hold the bowl with your left. That way you won't bump into others'."

"How shall I remember?" Wonders Panda. Then he spots the pocket on the right side of his apron. "Now, I see. My right hand is on the same side as my pocket," he says happily.

Now Panda is lining up with his friends. Teacher Deer calls, "Right turn!"

Unfortunately, Panda turns
left and runs right into
Pig's big nose.

The teacher tells him, "You turned the wrong way. The side with your left hand is the left. Its opposite is the right."

"If you can't distinguish the left from right," the teacher continues. "You'll wreck on a reef while navigating a ship or crash into a mountain while piloting a plane."

Back at home, Panda
busily practises turning

left and right. His mother
is very pleased with him.

Mum asks Panda to go shopping. She tells him, "Be sure to ride your bicycle along the right side of the street. Otherwise, you'll run into others."

Outside, Panda sees Rabbit on a tricycle, riding towards him along the opposite side of the street. "Brother Rabbit," Panda cries out. "Come here! You are riding along the left side."

Rabbit is puzzled. Pointing at the street, he says,
"Why, no. I am on the right side."

Running up to Rabbit, Panda says, "The side I was riding along is right, because it's on the side of my right hand. You were riding on the side of my left hand."

They argue and argue. Neither can persuade the other.

Just then Elephant, the policeman, comes by and hears the argument. He gently turns Panda round. Then he asks Panda, "Which is your right side?" Panda points to where Rabbit was riding.

Elephant then turns Rabbit round and asks him,
"Where is your right?" Rabbit points to Panda's side.

"Now, I see," Panda says. "My left side is the right side of someone who is walking towards me. So Rabbit is right."

Rabbit is happy, too.
“I also understand that my
right is his left,” he says.

Rabbit and Panda say
goodbye to each other.

Now, do you know what this is: Left or right?
